The **PEMSERTER® Series 2000® automatic fastener installation Press system** incorporates upgraded operating features and expansion capabilities to promote streamlined job productivity and quality. The press offers the ideal technology to install all types of self-clinching fasteners rapidly, reliably, and permanently in thin-metal sheets. Pressure System- Air Over Oil, Ram Force 1.8 to 71.2kN – 8 Tonne.

PEMSERTER® presses are designed to safely, reliably, accurately, and quickly install **PEM fasteners**. When using **PEMSERTER presses** to install **PEM fasteners** the entire fastener installation process is streamlined. No matter how complex or simple an installation challenge may be, using the PEM fastener and PEMSERTER press system will provide you with quality results. **"RING US FOR A QUOTE OR DEMO"**

PEMSERTER® SERIES 2000® QX™ Turret Tool System

The PEMSERTER® QX™ Turret Tool System for use on the current model* PEMSERTER® Series 2000® automatic feed press provides a quick and efficient method to quickly change between anvil tools while handling the work piece to install different fasteners.

The QX™ Turret Tool System has colour coded locations and can install four different fasteners; One in automatic feed mode, and three in manual feed mode.

The QX™ Turret Tool System uses the PEMSERTER® Series 2000® standard touch-screen for simplified set-up and verification of each fastener installation.

Bull's Eye - The system detects which station is in the install position and will not allow the operator to install unless the correct station is locked in position.

QX™ Turret Tool System

- **Operation:** Manual rotation with pneumatic position lock.
- **Configuration:** 4 position color-coded, one position (Green) auto-feed, remaining three manual load with color-coded fastener tray.
- **Touch Screen Setup** for all four stations including selection of installation force and number of fasteners to be installed per work-piece.
- **Ability to save** multiple jobs for future quick set-ups.
- **Only good installs are counted.** Once set up, the QX™ job will not allow you to install a fastener out of sequence. Operator is notified by visual and or audible signal to rotate turret to next location or that the work piece is complete per the QX™ job setup.
